Subject: immunity tracking offer
Date: 2020/04/27 10:23:00
Priority: Normal
Type: Note

Brett, Heidi, Matt,

Attached is another credible proposal for immunity tracking – this from TransUnion d (b)(5)

(b)(5) May be a way to merge (b)(5)

(b)(5)

(b)(5)

In addition to the unidirectional reporting work out there (Palantir /HHS Protect, CDC various) (b)(5)

(b)(5)

As fyi, ONC is funding the PULSE project to provide emergency front end access to HIE's no matter where the patients end up.

Don

Subject: Memo - Healthy America & TruPass

Don –

I hope you and your family are doing well! Please give them our best.

The attached memo is being shared leaders in Washington DC as well as state government officials. TransUnion is proposing a solution to get Americans back to some level of normalcy using existing technology that can be rapidly deployed in a consumer-friendly manner.

While this may not be the solution selected, it does have support and interest from some very influential politicians in Washington DC. The proposed solution is slated to be shared with the White House this week.

In addition to proposing the solution in Washington DC, it is also being shared with governors and with major employers across the US (e.g. professional sports, airlines, healthcare systems, health insurers, retail, etc.). TransUnion is looking to gain as much feedback and support as possible.

I am sending this to you in hopes that you can share it as you see fit within HHS and with other colleagues as we look for solutions. TransUnion certainly hopes we can help in any way possible so we can all get back to a more normal life.

I appreciate your help. I look forward to being able to see you soon!

- JCB

Healthy America and TruPass™ - Covid-19 Solution to Reopen America

TransUnion and other US-based, healthcare technology partners have developed a solution to allow **America to safely and confidently return to normalcy.**

In conjunction with a national testing strategy, in order to restart our economy, businesses and consumers need to be assured they are safe from Covid-19 risks now and into the future. A national Covid-19 database must be created and updated in real-time to track an individual's health status. Once collected the data is only powerful if it can be consumed by businesses and consumers to mitigate risk in their everyday interactions while maintaining an individual's privacy.

TransUnion (transunion.com), a Chicago-based, global information and insights company, has been trusted with consolidating, protecting and distributing data for over 50 years. Unlike other companies, TransUnion's brand is well-known and regarded by both businesses and consumers. TransUnion currently manages over 65 petabytes of live data from over 90 thousand sources in a highly regulated environment. Data and analytical insights are delivered to over 65 thousand businesses and 40 million consumers in bulk or individually, via a batch file or on demand. Our mission is to make trust possible between businesses and consumers, by ensuring that each consumer is reliably and safely represented in the marketplace. This is precisely what America needs to re-open our economy.

Utilizing existing technology and infrastructure is critical to delivering a solution now. TransUnion has partnered with SiriusIQ (siriusiq.com), a Newark, Delaware-based, clinical lab information exchange company and UST Global (ust-global.com), an Aliso Viejo, California-based digital transformation company to consolidate lab result information. Together they access real-time connections to the top 22 clinical laboratories and 40 major hospital systems and 20 Federally Qualified Health Clinics (FQHC) in the United States providing access to over 90% of lab orders and results.

TransUnion will validate an individual's identity and maintain the *Healthy America* database indicating the presence of illness and/or the presence of antibodies based on FDA approved laboratory results delivered by SiriusIQ. Individuals will receive a Quick Response (QR) code through a mobile application indicating their health status. The consumer can then use the QR code on their mobile device to access government restricted sites such as airports and/or sporting events as examples. TransUnion can send batch files of ticketed consumers to obtain health status in bulk prior to a flight or event.

TSA PreCheck™ provided airline passengers with an increased level of confidence when boarding an airline after 9/11. Passengers returned to travel knowing fellow travelers had been screened and posed little to no risk of inflicting harm. TSA PreCheck™ status is delivered in bulk to airlines and directly to the consumer via their mobile application with a QR code.

TransUnion's TruPass™ will allow for the same level of increased confidence on a broad scale. Individuals can opt-in to obtain TruPass™ making it consumer friendly. Enrollment information would be validated utilizing TransUnion's Identity and Fraud Protection Solutions to ensure accuracy and fidelity of the *Healthy America* database. Upon completion of the appropriate PCR or antibody test, the FDA approved laboratory would send the results through SiriusIQ to TransUnion for inclusion in the *Healthy America* database.

Like 9/11, Covid-19 has and will change Americans' lives forever. TransUnion and our healthcare technology partners believe a solution can be deployed rapidly by leveraging existing technology delivered in a manner that individuals and businesses can readily adopt. Protecting American lives while reopening America are not mutually exclusive and it's our mission to work with the government to do both.

During this **Public Emergency**, TransUnion is proposing a **Federal Sole Source Contract** to implement the **Healthy America** database and our **TruPass™** solution. This engagement would meet the Public Emergency standard required by the US Department of Justice which directly refers to catastrophic events, declared states of emergency, and immediate health and safety concerns to the American people.
